Frequent Misconceptions About Happiness
#139 Laurie Santos: The Pursuit of Happiness
Key takeaways
Transcript
There is a misconception that putting more effort into being happy will lead to happiness.
Our minds tend to lie to us about the things that will make us happy.
We have a bias towards thinking that we will be happier in the future when certain things happen.
This bias is known as the arrival fallacy, where we expect to be happier than we actually are when certain events occur.

Welcome to Machine Learning!
What is machine learning? You probably use it dozens of times a day without even knowing it. Each time you do a web search on Google or Bing, that works so well because their machine learning software has figured out how to rank what pages.
When Facebook or Apple's photo application recognizes your friends in your pictures, that's also machine learning.
Each time you read your email and a spam filter saves you from having to wade through tons of spam, again, that's because your computer has learned to distinguish spam from non-spam email. So, that's machine learning.

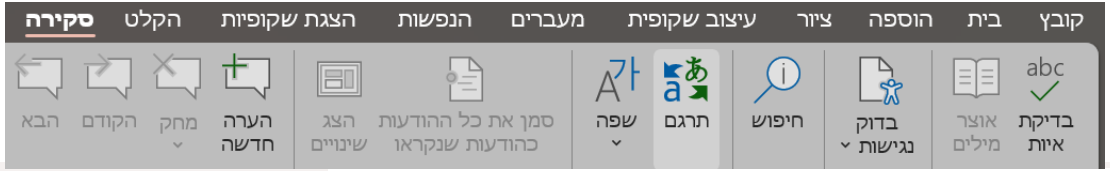
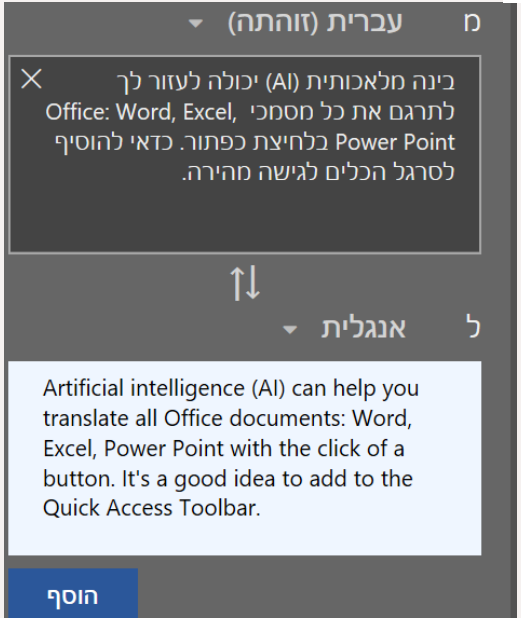
AI – Office: Word, Excel, Power Point



❖ **בינה מלאכותית (AI)** יכולה לעזור לך לתרגם את כל מסמכי **Office**: Word, Excel, Power Point בלחיצת כפתור. כדאי להוסיף לסרגל הכלים לגישה מהירה.


Artificial intelligence (AI) can help you translate all Office documents: Word, Excel, Power Point with the click of a button. It's a good idea to add to the Quick Access Toolbar.
